Objective

A passionate software developer with a strong foundation in full-stack web development, specializing in the MERN stack. Skilled in building scalable applications and solving complex problems using modern technologies. Eager to contribute technical expertise and innovative solutions in a collaborative team setting while continually growing in the software development field.

Education

Invertis University, Bareilly   2021–2025
B.Tech in Computer Science and Engineering

Technical Skills

Languages: Java, JavaScript, TypeScript (learning)
Web: React.js, Node.js, MongoDB, Express.js, Tailwind CSS, ShadCN
Tools: Git, Postman, VS Code, Vercel, Render
Concepts: Data Structures, Algorithms, REST APIs, JWT Authentication, Web Security

Projects

Food Ordering Website (MERN, TypeScript, ShadCN, Tailwind)   Ongoing
Built a food ordering platform with real-time order tracking.

- Solved the challenge of secure user authentication using JWT.
- Implemented real-time order tracking using WebSockets.
- Integrated Cloudinary for image uploads and Stripe for secure payments.
- GitHub Repository

E-Commerce Platform (MERN)   2024
Developed an e-commerce platform with product management and secure payments.

- Solved the problem of secure session management using JWT and role-based access control.
- Optimized product search, filtering, and sorting for fast discovery.
- Integrated Stripe for secure payment processing.
- GitHub Repository

Movie Web App (MERN)   2024
Created a full-stack movie web app with authentication and real-time updates.

- Solved the challenge of real-time user interactions with a dynamic update system.
- Implemented authentication and role-based access control.
- Added CRUD functionality for movies and user reviews.
- GitHub Repository

Certifications

- Cisco JavaScript Badge – Cisco (July 2024)
- Frontend Development – Reliance Foundation (July 2024)
